

Dr. L.C.F. Blackman,
Director,
Millbank.

D.E. Conway

DEC/AH/1

31st March, 1981.

REPORT NO. RD.1801 RESTRICTED

I enclose four copies of the above report. This report was produced in response to the request from B.A.T. (Suisse) following your discussions of the subject with Mr. Rice. You will recall that the report was originally issued as a Technical Memorandum and that you discussed this with John Jewell in B&W. The report takes account of the various points raised by B&W.

I suggest that a copy should go to Leaf Department and Production and, when the secondary circulation is considered, copies should go to all Companies with potential problems on nitric oxide delivery.

k
